Who We Are

Valtman Grant Group (VGG) is a specialist in asset structuring and repositioning. We focus on assets that sit outside the scope of conventional markets — dormant, underused, pre-filing, experimental, or transitional in nature — and reframe them for flexibility and cross-border deployment.

We are not a fund and not an asset manager. VGG is a structuring platform that builds purpose-fit vehicles and frameworks designed to expand the optionality of private assets.

Our Approach

- **Asset Engineering:** Transforming static holdings into flexible instruments by developing rights, licenses, and layered options.
- **SPV Frameworks:** Applying proven corporate structures in new ways, enabling cross-border adaptability and efficient repositioning.
- **Reframing Potential:** Enhancing the tradability and practical use of early-stage or overlooked positions through structured deployment.

Asset Scope

- Dormant and transitional positions
- Intellectual property and provisional filings
- Early-stage patents and codebases
- Pre-launch technologies and experimental assets

Sectors We Target

- **MedTech** – Diagnostics, digital health, and device IP are often trapped in pre-launch or regulatory limbo. We structure pathways for early-stage innovations to move cross-border or into joint ventures.
- **FinTech** – Payment architecture, compliance tooling, and algorithmic frameworks tend to stall before scaling. VGG reframes these assets into modular SPVs that can be positioned with regional operators.
- **Technology** – From software prototypes to dormant codebases, technology assets often sit idle once the original venture stalls. We apply rights engineering and SPV frameworks to make them tradable or deployable.
- **BioTech** – Provisional filings, lab IP, and early-stage research can be repositioned for partnerships or bundled into thematic shells, offering structured exposure to high-barrier fields.
- **Intellectual Property & Data Assets** – Not just patents, but datasets, proprietary algorithms, and trademarks that are underused or pre-commercial. These can be cross-licensed or compartmentalized for strategic use.
- **Energy Transition & Green Tech** – Many dormant filings and provisional patents exist in renewables, storage, and emissions tech.

Our Value

VGG builds flexibility where traditional channels see rigidity.

- Repositioning dormant assets into useful corporate paper.
- Expanding optionality through licenses, carve-outs, and structured rights.
- Cross-border adaptability through purpose-built SPV frameworks.
- Practical exposure to emerging sectors without requiring traditional securitization.
